```
The invention relates to a peptide conjugate having the formula:

(R X)n Peptide where n = 1-10; X = CoO, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where ct the functional group of the side chain is NH2 or OH; or X = 0 or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or COOH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one correctly optionally concentrated with a 1-5C straight or branched chain alkyl group, or benzyl optionally concentrated with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB37001-1837058 represent examples cof the peptide option of the conjugate is The peptides represent analogues of a Bel-2 superiamily polypeptide corresponding to amino acids 72-97 of the BH3 domain of the ceil death agonist Bad. The peptides conjugate is useful for modulating apoptosis in the cells of a subject, or for creversing B cell lymphoma/leukemia 2 (Bel-2)-mediated blockage of apoptosis in cancer cells. It is also useful for inhibiting Bel-2 conjugate is useful for modulating apoptosis in the cells of a subject, or for creversing B cell lymphoma/leukemia 2 (Bel-2)-mediated blockage of conjugate afflicted with a cancer characterized by cancer cells that cancer cells afflicted with a cancer characterized by cancer cells that cancer conjugate is useful for treating a conjugate is also useful for treating and conjugate is a conjugate is a subject afflicted with a cancer characterized by cancer cells that cancer cells and conjugate is a conjugate is a conjugate is a subject afflicted with a cancer characterized by cancer cells that cancer conjugate is a conjugate is a conjugate is a subject afflicted with a cancer characterized by cancer cells that cancer conjugate is a subject afflicted with a cancer characterized by cancer cells that cancer includes prostate, colorectal, gastric, and non-tymphocytic leukemia. The peptide conju
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY05411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
The term GD domain refers to a protein domain first identified in Bak and shown to be essential for the interaction of Bak with Bcl-x(L) and for Bak's cell killing function: and to peptides and/or molecules capable of mimicking its structure and/or function. The present sequence represents a GD domain corresponding to amino acid residues 52-77 of Bax. An antibody raised against a GD domain may be used to screen a cDNA expression library for clones comprising cDNA inserts encoding immunocrossreactive proteins. Truncated GD domain peptides have been shown to maintain the protein binding and cell killing function exhibited by wild type Bak. These molecules may induce apoptosis in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a bcl homology domain 3 (BH3 domain) of the invention, derived from a prospoptotic member of the BCL2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell respectially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide(s) comprising GD domains - have similar activities to wild type Bak, and cause cellular apoptosis for treatment of viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Apoptosis; follicular lymphoma; tumour; p53; antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GD domain region for

These peptides act independently of p53 status. Bak or GD domain mimetics that inhibit Bcl-2 may be selectively toxic to certain tumours, e.g. follicular lymphoma, which depend on high levels of Bcl-2 for their continued growth and survival. GD domain mimetics may also be used for combatting viral infections by causing apoptosis of infected cells.
                                                                                                                      The present sequence is the mammalian Bax Bcl-2 homology domain 3 (BH3) domain, which was used in a sequence alignment with the same domain of a putative version of the mammalian apoptosis regulator BBC3, which was designated BBC3-ORF2. The BBC3 protein, nucleic acids and antibodies are suitable for use in promoting cell death or for preventing apoptosis in malignant cells and those causing autoimmune diseases.
                                                                                                                                                                                                                                       Mammal; apoptosis; cell death; BBC3; apoptosis promotion; Bax; apoptosis inhibition; malignant cell; autoimmune disease.

The present invention describes an isolated or synthetic polypeptide (RI) comprising a less than full length maino acid sequence of a mutant CC Bcl-XL/Bol-2 associated cell death regulator polypeptide (RAD) or its correct mutant sequence, which contains amino acid substitutions at Seril8 of a human RAD, Seris5 of a mutante RAD (longer mutane BAD) or Seril3 of a mutante RAD (sorter mutane RAD). (I) has immunostimulant, neuroprotective, contropte, antischaemic, vulnerary, cytostatic, antivital, contropte, antischaemic, vulnerary, cytostatic, antivital, contropted and an apoptosis inducer or inhibitor. BAD polypeptides and contropted and an apoptosis inducer or inhibitor. BAD polypeptides and copolynucleotides can be used for screening candidate compounds and drugs correctivity that promote cell survival or apoptosis. Other uses include conducing or inhibiting apoptosis in a cell. Candidate compounds contentified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, ischaemic cell (long), reperfusion cell death, wound healing, cancer, viral infections, content of the present sequence represents a Bc1-family member consistency inventions as sequence which is used in an example from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New mutant Bcl-XL/Bcl-2 Associated Cell Death Regulator polypeptide, useful for screening for candidate compounds which induce or inhibit apoptosis, comprises maino acid substitutions at Seril8, Seri55 or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bcl-XL/Bcl-2 associated cell death regulator; DAD; mutant; apoptosis; immunostimulant; neuroprotective; nootropic; antischaemic; vulnerary; cyrostatic; antiviral; antiarthritic; antisinfammatory; wound healing; immunosuppressive; apoptosis inducer; apoptosis inhibitor; cancer; immunodeficiency disease; neurodegenerative disease; viral infection; ischaemic cell death, reperfusion cell death, arthritis; infertility; lymphoproliferative condition; inflammation; autoimmune disease.

                                                                                                                                                                                                                                                                                                                  The invention relates to a peptide conjugate having the formula:

(C (R-X))-peptide where n = 1-10; X = C=0, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = O or NH; the functional group is attached to the C-terminus of the peptide, or a side chain for the peptide, or a side chain for the peptide, where the side chain functional group is COOH CC or two double bonds, cyclobuty, cyclopentyl, cyclobaxyl containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclopexyl cyclopexyl cyclopexyl, cyclopexyl, cyclopexyl cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyclopexyl, cyc

                                                                                                                                                                                                                                                                                      This sequence represents a bcl homology domain 3 (BH3 domain) of the invention, derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is a specifically claimed truncated BAX protein tBAX78 which inhibits neuronal apoptosis induced by trophic factor deprivation. The protein consists of first 78 amino acids of human BAX alpha, that includes the N-terminal region and BH3 domain. It lacks the BH1, BH2 and C-terminal region are the transmembrane domain so the full-length BAX alpha. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The transmembrane domain has been shown to have anti-apoptotic activity.
                                                                                                                                                                                                                                                                                                                                                                                      AAY34149 standard; Protein; 131 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 4; Page 33; 43pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Truncated BAX polypeptides useful for preventing apoptosis of neurons for the treatment of nervous system disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 codon. Jesulting in a truncated protein. However, the domain responsible for its function is still present in the truncated protein. Bax (Bc1-2 associated x protein) is a proapoptotic member of the Bc1-2 gene family. CC Bax functions as a primary response gene in the p53-regulated apoptotic pathway. The Bax gene promoter has 4 p53 binding sites and the CC expression of Bax is upregulated at the transcriptional level by p53, and CC Bax mRNA, and protein expression have been shown to increase following induction of p53. Bax protein can function as homodimer; or it can neterodimerise with other Bc1-2 gene family members such as the entispophoric protein Bc1-2. Heterodimerisation of Bc1-2 family members model. This code is useeptibility of a cell to undergo apophosis. If Bc1-2 is in excess, however, Bax homodimers predominate and cell death via the "rhoostat" model. This can excess, however, Bax homodimers predominate and cell death is inhibited. If Bax is classified and a complete station in its monomeric form to accelerate cell death. Use of novel ademovital vectors containing this Bax gene may can function in its monomeric form to accelerate cell capite arcest and/or apoptosis in malignant cells carrying p53 cmutations. In addition, Bax overexpression could provide the apoptotic call cycle arcest and/or apoptosis in malignant cells carrying p53 cmutations. In addition, Bax overexpression could provide the apoptotic carrying p53 without the need for p53 itself.

                                                                                                                                                                     윰
                                                                                                                                                                                                                                                                                                             Considered with the human Bax protein. Bax is a protein which is associated with the human bc1-2 alpha and beta proteins, the sequences of which are given in AR7104-05 respectively. bc1-2 is encoded by a prote-oncogene and is capable of inhibiting appropriate in many comprehensive protein and is thought to function by enhancing the survival of hematopoletic cell systems. bc1-2 is a 26 kb membrane-associated cycloplasmic protein and is thought to function by enhancing the survival of proliferation of these cell types. bc1-2 has not been shown to directly promoting comprehensive to inmitting concentrations of II-3. bc1-2 has been shown to directly promote cell cycle progression nor does it necessarily alter the dose reponse to limiting concentrations of II-3. bc1-2 has been shown to commend the protein progression nor does it necessarily alter the dose considerates approach cell into a least induced by cytokine deprivation in an accelerates approach cell into and it also accs to counter the death repressor accelerates approach cell into sell death induced by cytokine deprivation in cell into between bc1-2 and Bax determines cell sustitution or deletion in the BHI or BH2 domains. This makes the substitution or deletion in the BHI or BH2 domains. This makes the connear therapy, controlling hyperplasias and eliminating self-reactive connective constrained by a proposition of the BHI or BH2 domains. The immunocaned connect therapy, controlling hyperplasias and eliminating self-reactive constitution bot 21s beneficial in treatment and diagnossis of immunocal deficiency diseases, including AIDS and neurodegenerative and ischaemic cell seast.
                                                                                                                                                                                                                  Ouery Match 100

This sequence represents human wild-type Bax protein. A naturally coccurring mutant protein (ANY34149) was also isolated. Bax (Bcl-2 associated X protein) is a proapoptotic member of the Bcl-2 gene family. CC Bax functions as a primary response gene in the p53-regulated apoptotic ceptiway. The Bax gene promoter has 4 p53 binding sites and the ceptival of Bax is upregulated at the transcriptional level by p53, and CC expression of Bax is upregulated at the transcriptional level by p53, and CC pathway. The Bax sprotein expression have been shown to increase following induction of p53. Bax protein can function as homodimer; or it can heterodimerise with other Bcl-2 gene family members such as the antisymphototic protein Bcl-2. Heterodimerisation of Bcl-2 family members provides a means of controlling call death via the "rhoostat" model. This can be provided a means of controlling call death via the "rhoostat" model. This compose is that the relative amounts of Bcl-2 and Bax determine the susceptible to apoptosis following exposure to an apoptotic stimulus. The cases, however, Bax homodimers predominate and cell death is inhibited. If Bax is conceptible to apoptosis following exposure to an apoptotic stimulus. Additionally, Bax can function in its monomeric form to accelerate cell cell cycle arrest and/or apoptosis in malignant cells carrying p53 cultations. In addition, Bax overexpression could provide the apoptotic cell cycle arrest and/or apoptosis in malignant cells carrying p53 cultations. In addition, Bax overexpression could provide the apoptotic cell cell could provide the apoptotic cell cell cycle arrest and/or apoptosis in malignant cells carrying p53 cultations. In addition, Bax overexpression could provide the apoptotic cell cycle arrest and/or apoptosis in malignant cells carrying p53 contained the apoptotic cell cycle arrest and/or apoptosis in malignant cells carrying p53 contained the apoptotic cell cycle arrest and/or apoptosis in malignant cells carrying p53 contained cells carrying p53 cells cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; Page 149-150; 151pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New adenovirus vectors, used for killing or inhibiting the growth of cells and for treating cancers .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the human BAX protein. The invention relates to a bcl homology domain 3 (BH3 domain), the derived from a proapoptotic member of the BCL-2 family. The BH3 polypeptide can be used in a method for promoting apoptosis in a target cell, especially where the cell is a cancer cell a virus infected cell or an autoantibody producing cell. The BH3 polypeptide can be used in therapeutic compositions for treating disease including cancer, other lymphoproliferative conditions, arthritis, inflammation, and autoimmune diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure; Fig 21c; 104pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  08-APR-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      BH3 domain; cell death agonist; bcl homology domain; BCL-2 family; apoptosis promoter; cancer cell; virus infected cell; inflammation; autoantibody producing cell; cancer; lymphoproliferative condition; arthritis; autoimmune disease; therapy.

The Bax protein is used in a composition which comprises a bc1-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bot-2-related function, e.g. substances that inhibit binding of Bax to bc1-2, which would be potentially useful as drugs for modulating

The Bax protein is used in a composition which comprises a bc1-2 family member polypeptide, a naturally occurring Bax polypeptide and an antibody that binds to the Bax polypeptide. The composition is used to identify modulators of bc1-2-related function, e.g. substances that inhibit binding of Bax to bc1-2, which would be potentially useful as drugs for modulating

                                                                                                                                                                                                                    The present sequence is a human BAX alpha protein, a pro-apoptotic protein which is a member of BCL-2 family of proteins that are involved in regulation of neuronal programmed cell death. The patent discloses specific truncated proteins derived from BAX alpha which inhibit neuronal apoptosis induced by trophic factor deprivation. The anti-apoptotic truncated BAX (tBAX) proteins include tBAX70, tBAX78 and their mutants. These proteins contain the N-terminal region and at least a portion of the BH3 domain contain the N-terminal region and at least a portion of the BH3 contains. The tBAX protein lacking only the transmembrane domains. The tBAX protein lacking only the transmembrane domain has been shown to have anti-apoptotic activity. The tBAX proteins are used to treat diseases associated with neuronal apoptosis, e.g. neurodegenerative diseases, peripheral nerve injury, spinal cord injury, head trauma and stroke.
                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Total number of hits satisfying chosen parameters:
          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
          protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Issued_Patents_AA:*

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score
